

**Primaplan** establishes P3 to Baan IV link.

In corporation with GTI Mechanical Installation, **Primaplan** successfully created a link between P3 and Baan IV using Flint. This particular link was created in the Oisterwijk office of GTI where Baan IV implementation is reaching its final phase. The Baan IV software and Oracle Database is located in the GTI Mechanical Geleen office. The link was created using an Oracle 7.3 ODBC connection with an ISDN phone line through TCP/IP. With P3 and Flint installed on a local Oisterwijk PC, this is a true two tier link.

Setting up the environment, including two test procedures took only one day to complete. Running the procedures with the Flint Executive gave an amazingly good performance.

Almost similar to a connection with a local MS Access database. System requirements for this link: **Primaplan Flint 1.3c** Primavera Project Planner Pc able to run Baan IV Oracle Client for Windows 95/NT (this will install the ODBC driver)
